Similar App A [PLACEHOLDER]

move to your branch for this, remember to merge branches when complete

Similar App B - Studo

The main thing Studo offers is an app which combines both academic and campus services into one place. For example, SETU Timetables for students and Moodle are two seperate platforms, but Studo combines these togethe and lets you access them from the same application. They have partnerships and supply software to over 60 different universities across Germany and Austria. Their mobile app has over 500,000 downloads, not including desktop downloads.

Good things about Studo:

- Combines lots of daily university/on-campus services (email, calendar, grades, timetables)
- Real-Time polls and push alerts
- Easy to integrate existing records and student information
- Easily acessable course and grade overview with key dates for assignments and uploads
- Both synced and accesible from multiple devices
- University news feed and up-to-date food menus

Bad things about Studo:

- Many tools and featurs are admin controlled, not easy for students to customise what they see, etc
- Not accesible for students, looking at reviews it looks like students struggle connecting their student accounts to the application
- The calander is limited on what you can add/info you add to it
- Chat feature between students is heavily moderated and deletes things that don't go against the platforms rules
- 2FA and login features are unreliably and often don't work, affecting time pressured situations

Product Vision for Studo:

1. FOR students and staff in universities or colleges
2. WHO need a simple and efficient way to access sepereated resources, stay on track with campus events and resources, and communicate regularly with staff in their institution without constantly swapping between platforms.
3. The Studo App is a mobile and desktop campus management and student services application
4. THAT (key benefit)
5. UNLIKE (primary competitive alternative)
6. OUR PRODUCT (primary differentiation)
